

EUCARVET

good.for animals

Dosage suggestion

1 Tablet per 10 Kg of body weight distributed over two feedings (in the mornings and in the evenings).

The recommended dosage must be halved and each half given in the mornings and in the evenings in order to obtain a continuing regulation of the digestive processes.

For **small dogs** (10 kg) the tablet should be halved with a knife or with a device to part tablets.

Larger dogs

receive the tablets either as a whole or in small pieces with feed.

If animals **refuse intake**, tablets can be crushed (between two spoons or with a mortar), mixed with lukewarm water and directly fed orally with a syringe.

Suggested duration of application: 2-5 days
It is essential that the animal has access to sufficient water.

EUCARVET

good.for animals

Composition

Vegetable Charcoal (Carbo Ligni plv.)	36%
Senna (Fol. Sennae)	21%
Sulphur (Sulphur dep.)	10%
Rhubarb extract (Extr. Rhei)	5%
Peppermint oil (Aetherol, Menthae)	0.1%
Fennel oil (Aetherol, Foeniculi)	0.1%

Analysis

Raw protein	4.1%
Raw fat	10.1%
Raw fibre	34.5%
Raw ashes	9.6%
Methionine	0%
Lysine	0%

EUCARVET supports the natural digestive processes:

- Non activated CARBO VEGETALIS detoxifies and soothes the intestine
- RHUBARB (extract) and SENNA (powder) supports the digestion
- ETHEREAL PEPPERMINT OIL and ETHEREAL FENNEL OIL release oppressive discomfort of the intestine in a pleasant way
- SULFUR cleanses the intestines

EUCARVET

good.for animals

Feed supplement

For sows, piglets, bovines, horses, cats, dogs and poultry

Natural regulation of the digestive processes

The worldwide successful product **EUCARBON®** is now available for animals in adapted form.

Tradition and Innovation

EUCARBON® is proven effective since 1909 for human use and is exported worldwide.

Well-being by Balance

EUCARBON®, natural regulation for the bowel.

General information on the digestive physiology of cats and dogs:

Most dysfunctions of the alimentary system are due to errors in feeding and stress. Usually an abrupt change of feed as well as an inappropriate composition of feed (excess supply of feed, excess of carbohydrates, decomposed or polluted feed, too cold or too fatty feed) causes these dysfunctions. Sometimes chemical substances (e.g. insecticide) can be the reason or, last but not least, stress-related digestive dysfunctions.

Stress affects our pets' digestion in the form of diarrhoea or, more rarely, constipation. Usually these dysfunctions can be cured by one day of fasting and an adjacent diet (e.g. Rice or Chicken). In doing so it is essential to see to sufficient supply of water. Sometimes application of electrolytic solutions may be necessary.

Additionally, feed supplements that support and stabilise digestion, such as EUCARVET have been proven effective. These feed supplements help re-establish and regulate natural digestion. If digestive dysfunctions are not healed within a few days, veterinarian advice must be sought.

Dosage suggestion for dogs and cats

If defecation is frequent (and soft or fluid) due to stress of travel, intake of decomposed feed or snow, it is suggested to feed 1 tablet / 10 kg body weight.

Our pets suffer increasingly from digestive dysfunctions due to hypersensitivities or allergies to certain foods. The constantly increasing environmental pollution and feeding of feeds that are loaded with preserving agents as well as frequent change of feeds can, similarly to humans, lead to alternating digestive dysfunction. Oppressive discomforts alternate with soft to fluid defecation. In animals that suffer from alternating digestive dysfunction frequently, EUCARVET can stabilise digestion (1 tablet / 10 kg body weight).

Nowadays it often happens that decomposed feed is given to our pets. The feed, especially dry feed, doesn't actually look decomposed, but is polluted with metabolites from mildew due to vendors' or customers' inappropriate storage in e.g. damp conditions. In these cases it is suggested to feed 1-2 tablets EUCARVET / 10kg body weight so that EUCARVET activates digestive functions and gets rid of decomposed food quicker.

If digestive activities are diminished or oppressive discomforts or very hard excrements occur, it is suggested to feed 2-3 tablets /10kg body weight to activate and stabilise digestion. When the oppressive discomforts cease and stool becomes softer, the dosage can be reduced to 1 tablet /10kg body weight.

Further applications

EUCARVET can also stabilise and support the digestion of horses, bovines, sheep, goats, pigs and poultry.

Pack sizes

For **small animals or for acute care** tablets in blister packs: 3 x 10 tablets each

For **bigger animals and herd care** as Granules: 250 g, 1 kg, 10 kg, 25 kg and 50 kg
