EUCA[®]VET

**No more problems concerning MMA – Syndrome
in piggery !!!**

COMPOSITION	EFFECTS
Folium Sennae	laxative, stimulating peristalsis
Extractum Rhei	laxative, stimulating peristalsis
Carbo ligni (C. vegetabilis)	adsorbitive, antidiarrhoeal, detoxicating
Sulphur depuratum	antiseptic, laxative
Aetheroleum Menthae pip.	production of gastric fluid, carminative
Aetheroleum Foeniculi	production of gastric fluid, carminative

**The maintenance of physiological digestion before and during birth is the best
prophylaxis !!!**

Deficient defecation or constipation is of frequent occurrence in sows with farrow. In the sequel intestinal toxins are conveyed via circulation to the uterus and the teats. There they may induce impairment of tissue and increase the risk of infection with Escherichia coli. This risk is further increased by the rapid propagation of Coli bacteria during constipation. Another critical phase is the feed change from feed for gestation to feed for lactation.

The efficacy of the special formulation *EUCA[®]VET* is due to its multifactorial action:

1. *EUCA[®]VET* stimulates the digestion and prevents constipation due to its laxative effects (Senna,Rhei).
2. *EUCA[®]VET* maintains the physiological digestion and inhibits the growth of Coli bacteria. The active ingredient Carbo ligni adsorbs toxins and gases accumulated in the bowels.
3. The active ingredient Sulfur has additional bactericidal effects.
4. In addition the ingredients mint and fennel oil have carminative effects and lead to the high acceptance by the sows.

The best effect can be recognised at a dosage of 2kg *EUCA[®]VET* per ton of sow feed, 2-3 weeks before having a litter.

!!! NO WAITING PERIOD !!!
