Subject: - Using **EUCARBON** in the veterinary filed

The product **EUCARBON** is one of the most effective products I have been using in my practice so far.

Primarily **EUCARBON** is a drug used in human medicine, but I in my work, both in the field and in my practice, I have used it for the treatment of animals and the results achieved were perfect

USES OF EUCARBON IN THE VETERINARY FILED:-

This is an overview of the cases when I used **EUCARBON** for the treatment of animals, mainly for racehorses and pets.

HORSE:-

For horses, I used **EUCARBON** mainly in the cases of gas colic and mild case of colic's.

Due to the availability of **EUCARBON** in tablets form for use in humans only, I had to take more than 50 tablets in box; I crushed the tablets, dissolved them in water and gave them to the horse via stomach tube in the same manner as for other medication given in similar ceases.

I would like to mention one case, which occurred with an Arabian breed horse, it had fed soaked barley (barley was socked in the water for whole day and not sufficiently dried before being given to the horse), as consequence the horse showed a symptoms of colic's, I gave it the necessary medication as usual.

As this was not very helpful, I applied **EUCARBON** that finally brought about the desired effect so that horse saved.

Now **EUCARBON** is one of the main medications in used.

DOGS and CATS:-

I used **EUCARBON** for the first time in a case of food poisoning in a Yorkshire dog. In cases of poisoning generally I used the universal anti- dote that contain charcoal.

As charcoal is not always available it happened that I had no remedy at hand, therefore I gave the dog **EUCARBON** tablets and I was able to save it, now I apply **EUCARBON** in similar cases.

In addition, I applied **EUCARBON** for the treatment of constipation where it proven to be highly effective.

Based on the above-mentioned cases I can say in conclusion that I am very satisfied by the results achieved with **EUCARBON**.
